*Enrollment; *Junior Colleges
IDENTIFIERS *California

ABSTRACT

This report compares the number of associate degrees awarded for the school year 1973-74 to fall enrollments. Average enrollment in California community colleges was 8,772 (median=7,193); the average number of degrees awarded was 687 (median=591). The number of students enrolled per graduate averaged 12.77 (median=12.17), while an average of 78.32 degrees were awarded for every 1,000 students enrolled. Overall, the degrees awarded equaled 7.8 percent of college enrollment; 57.6 percent of the degrees were awarded to males (4.5 percent of college enrollment), and 42.7 percent of the degrees were awarded to females (3.3 percent of college enrollment). Community colleges in California have a variety of emphases and objectives. Some colleges primarily prepare students for transfer to a four-year college or university, while others dedicate themselves to the vocational needs of students. These data must be interpreted with a recognition of the community college's obligation to fulfill the needs of the adults in the community. Five tables are appended. (Author/NHM)

AN ANALYSIS OF THE DEGREES AWARDED BY 97 COMMUNITY COLLEGES IN CALIFORNIA

Data from 97 community colleges in California were obtained to determine the degrees awarded students from these colleges. The data indicating the number of degrees for the school year 1973-1974 are compared with the fall enrollments for 1973.

The data in Table 1 indicates that El Camino College had the highest enrollment in the state with 23,579 students enrolled. The greatest number of degrees awarded from any college was from Sacramento City with 1,815. El Camino College ranked ninth with 1,536 degrees awarded as is presented in Table 2.

When the data from Tables 1 and 2 are combined in two different ways, the results are presented in Tables 3 and 4. Table 3 indicates the number of students enrolled per graduate. West Hills had just under four students enrolled per graduate, while North Peralta had just over 41 (Mendocino, Indian Valley, and San Diego were not mentioned because of them being evening or new colleges.). El Camino College ranked 74th with 15.35 students enrolled per degree awarded. Table 4 presents the colleges in the same order but indicating the number of degrees awarded for ever 1,000 students. El Camino awarded 65.14 degrees (or 6.514 per cent) for every 1,000 students. The highest college was West Hills with 255.19 (25.5 per cent), and the lowest (ignoring the three identified above) was North Peralta with 24.24 (2.4 per cent).

It is noted that colleges throughout the state have a variety of emphases and objectives in their educational endeavors. Some colleges are more oriented toward being a "junior" college whose

emphasis is in preparing students for transfer to a four-year college or university. Other colleges are dedicated to fulfilling vocational needs of students. Many classes (such as real estate, welding) have a large per cent of students who are more interested in taking a course "here and there" rather than obtaining a degree. A community college should meet the needs of the adults in the community. This criterion should be used as a basis to interpret the data in Tables 3 and 4.
